

AIDAN TURICO

Phoenix, AZ | (602) 558-7709 | aturico@asu.edu | [linkedin.com/in/aturico](https://www.linkedin.com/in/aturico) | github.com/ATurico26

EDUCATION

Arizona State University, Ira A. Fulton Schools of Engineering Tempe, Arizona

Bachelor of Science in Aerospace Engineering, Barrett, The Honors College - Expected May 2030

Brophy College Preparatory Phoenix, Arizona High School Diploma; GPA: 3.5/3.8 - May 2026

SKILLS

Programming: Java, Python, Git/GitHub

CAD & Fabrication: Onshape, FDM/Resin 3D Printing, CNC Machining, Waterjet Cutting, Laser Cutting, Soldering

Robotics & Control Systems: PID/PIDF Controller, Feedforward Control, Motion Profiling, Autonomous Path Planning, Kinematics, Sensor Fusion

Software: Autodesk CFD(computational fluid dynamics), Canva, Microsoft Excel, Powerpoint, Word, Google Docs, Sheets, Slides

PROJECTS - [PORTFOLIO](#)

Differential Swerve Drive - FIRST Tech Challenge Team 201

March 2024 - January 2025

- Designed a custom differential swerve drivetrain which was iterated over 10 months before reaching a final design that included hot-swappable modules, custom 3D printed nylon resin gears, and reliability in a competition setting.
- Designed, manufactured, and helped build the final robot design which included custom inhouse waterjet cut plates and 3D printed parts, optimised linear extending arm and claw, and various COTS electronics and components.
- Combined and built upon 2 autonomous path planning softwares, Road Runner and Pedro Pathing, to integrate the best features into the unconventional drivetrain.
- Final robot was awarded 1st Place Inspire Award at a Regional Competition, 1st Place Innovate Award at the Arizona State Championships, and 2nd Place Innovate Award at the FTC International Premier Event in Michiana.

Auto-Targeting Turret & Shooter System - FIRST Robotics Competition Team 991

January - April 2026

- Developed code for real-time projectile trajectory calculations with robot velocity compensation which used sensor fusion from Limelight 4 April tag vision, odometry, and IMU data.
- Designed, manufactured, and assembled the turret and shooting mechanism from custom inhouse waterjet cut plates, 3D printed parts, and various COTS components.
- Final robot finished 6th in qualification rankings at the 2026 Las Vegas Regional and was awarded the Industrial Design Award.

Miniature Turbojet Engine - Personal Project

2024 - Present

- Independently researched and designed a miniature turbojet engine in Onshape from concept through component selection and manufacturing.
- 3D printed initial components and prepared the parts for further fabrication and assembly.

Cardboard Canoe

February - April 2026

- Designed, manufactured, and constructed a 2 person canoe as part of a team using only cardboard, duct tape, and plastic bags. Final design was shaped using mathematical functions and was tested using Autodesk to simulate fluid dynamics.
- Final canoe completed 6+ laps across the Brophy 60m competition pool without leaking and managed to accommodate 6 students at once including 2 audience members during several victory laps.

LEADERSHIP, SERVICE & HONORS

Innovation Lead / Lead FRC Designer & Programmer - Brophy Robotics

2025-2026

- Led design and programming efforts for FRC robot, reviewed robot designs, coordinated component purchase lists, and supported design and programming leads in mentoring new members.

FIRST Robotics Volunteer & FLL Outreach Mentor

2024-2026

- Helped host two FTC competitions and volunteered at additional FIRST events; mentored an FLL program at Ss. Simon & Jude School as FTC team outreach.

Honors: AP Scholar with Distinction (2026); FTC Inspire Award, 1st Place, 2x team recipient; FTC Arizona State Championship Innovate Award, 1st Place; FRC Industrial Design Award, team recipient
